

SPEED ACCELERATOR SHOWCASE — ASSESSMENT APPENDIX

Appendix A

Audience Personas

Fictional sample data for LDV Automotive

The data in this document is fictional and provided as a structural reference for the assessment. You may use it directly, modify it, or create entirely new content. The focus is on how you present this type of content visually and interactively — not on data accuracy.

. Segment 1 — Ute Intenders (~120,000)

The First-Home Renovator (32,000)

Snapshot

A couple in their late 20s who recently bought their first home in a growth corridor suburb. Weekends disappear into endless tip runs, garden waste removal, and trailers full of materials. They've never owned a ute but their hatchback is holding them back from DIY projects they could otherwise tackle themselves.

Key Barriers

Feel intimidated by traditional "ute culture"; unsure if a ute suits their lifestyle long-term; worried their partner will feel it's impractical for everyday driving.

Key Triggers

Calculating how much they've spent on hire vehicles and removalists; seeing home renovation content creators using utes; realising their next big project (deck, carport) requires material hauling.

Core Motivations

Build long-term financial independence through DIY; feel grown-up and capable in their new homeowner identity; avoid repeat hire fees that add up over renovation years.

Media Consumption

Instagram home renovation content; Pinterest vision boards; TikTok DIY creators; home loan podcasts; Reddit r/AusFinance; email newsletters from real-estate sites.

The Weekend Adventurer (48,000)

Snapshot

A mid-30s mountain biker, surfer, or camper living in inner-ring suburbs of capital cities. They spend every second weekend chasing waves, trails, or campsites. Gear keeps expanding — surfboards, MTB rigs, camping boxes, swags — and their current SUV can't swallow it all.

Key Barriers

Partner concerns about fuel economy for daily commuting; insurance cost anxiety; fear of becoming a "bro" cliché with a lifted ute.

Key Triggers

A new pursuit (dirt bikes, paddleboarding) that needs bigger cargo; friends who've made the switch and now invite them to better trips; booking a remote camping weekend they can't reach in a sedan.

Core Motivations

Live a richer life through adventure access; own gear that enables spontaneity; belong to a community of like-minded weekenders.

Media Consumption

Adventure-specific YouTube channels (not generic ute reviews); Strava and AllTrails apps; podcast ads on outdoor shows; ticketed brand events at trail heads; Meta ads retargeted from outdoor gear retailers.

The Hobby Farmer (40,000)

Snapshot

Early 50s professionals who recently purchased a 5–20 acre lifestyle block 90 minutes outside the city. They still work office jobs but spend weekends fencing, managing livestock, and burning off. This is their first rural property and everything is a learning curve.

Key Barriers

No previous experience buying a capable vehicle; overwhelmed by spec sheets and tow ratings; worried about dealer service when city-based 4 days a week.

Key Triggers

An incident (bogged in paddock, failed tow attempt) that proves the SUV isn't enough; a rural neighbour's recommendation; a new project (orchard, livestock) that requires regular hauling.

Core Motivations

Fulfil a lifelong "tree change" dream; make smart practical choices as newcomers to the land; earn credibility with more experienced rural neighbours.

Media Consumption

Hobby farmer Facebook groups; rural lifestyle magazines; landcare podcasts; dealer workshops held at rural shows; targeted LinkedIn ads for lifestyle-property owners.

. Segment 2 — Large SUV Intenders (~180,000)

The Blended Household (52,000)

Snapshot

Two working parents in their late 30s with four children between them from previous relationships. They need a genuine 7-seater with three rows of actual legroom, multiple USB ports, and enough boot space to pack for six on weekends.

Key Barriers

Complex seating configuration requirements (child seats, boosters, teens); negotiating one shared vehicle between two drivers with different tastes; space for contact sports kit (bags, sticks, pads).

Key Triggers

A teenager who refuses to fold their legs in the third row; an annual holiday that requires a roof box last time; co-parenting schedule changes requiring more bootspace flexibility.

Core Motivations

Create a vehicle that genuinely works for a modern blended family; reduce household friction around transport logistics; find a unified solution everyone feels ownership of.

Media Consumption

Modern parenting podcasts; family blogger recommendations; Instagram Reels from blended family influencers; school parent Facebook groups; streaming TV during family movie night.

The Road Trip Romantic (38,000)

Snapshot

A DINK (double income, no kids) couple in their 40s who have discovered long-distance Australian road trips as their shared passion. They've done three big interstate drives in the last two years and are planning a six-month lap. They want comfort, range, and reliability — not family functionality.

Key Barriers

Don't need size for kids, so feel like the segment isn't made for them; overwhelmed by "family SUV" marketing that misses their use case; cabin comfort over two-day drives matters more than tow capacity.

Key Triggers

A bucket-list trip coming up (e.g., "we want to drive the Nullarbor before we turn 50"); a friend's recent touring trip on social; feeling boxed-in by their current sedan on longer drives.

Core Motivations

Accumulate shared experiences while they're healthy and mobile; travel without the constraints of caravanning; stay spontaneous enough to change route mid-trip.

Media Consumption

Travel blog newsletters; regional tourism content on YouTube; audiobook and podcast subscriptions; Meta ads for accommodation and tourism; in-flight magazines on work trips.

The Teen Driver's Parent (35,000)

Snapshot

Parents in their late 40s whose eldest child is turning 17 and about to get a learner's permit. They're upgrading now knowing the vehicle will eventually become the teen's first car. Safety rating, insurance group, and resale matter more than luxury.

Key Barriers

Split priorities (current family driver vs future teen driver); uncertainty about what tech a teen will need vs what they'll misuse; unwilling to buy twice in three years.

Key Triggers

The teen passing their learner's test; insurance quotes that shock them; a friend's child having a minor accident in an older second-hand car.

Core Motivations

Protect their child with the safest possible vehicle; make a smart multi-year investment; teach driving responsibility with a capable but not indulgent car.

Media Consumption

P-plate parenting Facebook groups; driver safety organisation content; Parents' podcast episodes on teen milestones; targeted insurance comparison ads; school newsletter sponsorships.

. Segment 3 — Van Intenders (~75,000)

The Creative Studio Operator (18,000)

Snapshot

A freelance photographer, videographer, or event set-designer in their 30s running a small creative business. They carry expensive equipment that doesn't fit in a sedan — lighting rigs, backdrops, tripods, cases. Their van is office, stockroom, and studio on the move.

Key Barriers

Equipment security (break-ins during shoots); image-conscious about client pickups; concerned a utility van signals "tradie" instead of "creative professional".

Key Triggers

A contract for a bigger client requiring on-location gear; a colleague's gear theft from a sedan; realising leasing vs buying changes the tax position.

Core Motivations

Project professionalism at client sites; scale the creative business without renting gear trucks; create a mobile workspace that expresses the studio brand.

Media Consumption

Creative industry Instagram accounts; YouTube gear review channels; Discord communities for photographers; podcasting platforms; industry awards and portfolio showcase sites.

The Community Support Provider (22,000)

Snapshot

A 40s disability support worker or in-home care coordinator who visits 8–12 clients across the suburbs each week. They need a vehicle that fits mobility equipment (wheelchairs, walkers, lift equipment), operates on tight NDIS funding margins, and is easy for clients to board and exit.

Key Barriers

Tight budget from funding constraints; accessibility compliance requirements; long service life needed to spread cost across many years.

Key Triggers

New client with heavier mobility equipment; funding body procurement guidelines updating; aging of current vehicle causing reliability stress on service delivery.

Core Motivations

Deliver consistent, dignified care to every client; minimise downtime that affects vulnerable people; manage the business sustainably on narrow margins.

Media Consumption

NDIS provider networks and newsletters; allied health professional associations; LinkedIn content from disability sector leaders; community radio; GP clinic pinboards.

The Pop-Up Entrepreneur (14,000)

Snapshot

A mid-30s entrepreneur running a weekend market stall, food van, or pop-up retail brand. The business is growing but not large enough to warrant a permanent shopfront. They need to pack up, transport, and rebuild their setup dozens of times per year.

Key Barriers

Highly variable cash flow limits what they can commit to; setup/pack-down time directly affects profitability; don't qualify for traditional fleet-finance products.

Key Triggers

A market organiser inviting them to more events than their current vehicle allows; a small-business grant or tax incentive for vehicle purchase; a quiet mid-week slot becoming a recurring corporate gig.

Core Motivations

Scale the side-business into a sustainable primary income; project a polished brand at every pop-up location; reduce physical fatigue of set-up/pack-down cycles.

Media Consumption

Small-business Instagram content; market organiser social groups; Shopify and Square seller newsletters; entrepreneur podcasts; community Facebook groups.
