

TECHNICAL ASSESSMENT BRIEF

Junior Digital Experience Designer

SPEED Accelerator Showcase

CANDIDATE

Thea Vera Sumagang

ISSUE DATE

8 May 2026

DEADLINE

14 May 2026 (EOD)

1. Overview

At The Speed Agency, we build interactive web-based tools called SPEED Accelerators for our clients. These are data-rich single-page applications that showcase audience insights, customer journeys, and strategic recommendations. They are used as pitch and presentation tools during new business and client meetings.

A SPEED Accelerator sits between an interactive pitch deck and a data dashboard. It is a self-guided presentation tool that a client's marketing team can explore on their own — clicking through audience segments, hovering over data points, and drilling into journey stages — without needing someone from our agency to walk them through it.

For this assessment, you will design and build a SPEED Accelerator Showcase for a fictional pitch to LDV Automotive (an Australian-market vehicle brand). This will test your ability to translate a client brief into a polished, interactive digital experience.

2. The Brief

You are designing a client-facing interactive web presentation for LDV Automotive. Imagine you are pitching to LDV's marketing team to demonstrate The Speed Agency's strategic and analytical capabilities.

Required Sections (minimum 3 of the following)

- 1. Audience Personas** — Visualise audience segments and individual personas in an interactive, engaging format. Sample persona data is provided in Appendix A.
- 2. Customer Journey** — Map a customer decision journey across multiple stages with touchpoints, barriers, and opportunities. Sample journey data is provided in Appendix B.
- 3. Market / Category Overview** — Present a market summary with charts or data visualisations. Sample market data is provided in Appendix C.
- 4. Landing / Hero Page** — Design an impactful entry point for the accelerator that sets the tone and guides the user into the content.

Appendices A, B, and C contain fictional sample data to give you a starting point. You may use this data as-is, modify it, or create your own. The structure and presentation quality matter more than the specific numbers.

3. Deliverables

01

Figma Design File

High-fidelity screens, components, and a clickable prototype

02

Live Webpage

Deployed, interactive implementation of your design

03

Code Repository

Clean, organised source code (GitHub or similar)

3.1 Figma Design File

- High-fidelity mockups for each section you build
- A clickable prototype demonstrating navigation flow and key interactions
- Organised layers, frames, and naming conventions
- A basic component library showing reusable design tokens
- At least one responsive breakpoint (desktop + mobile or tablet)

3.2 Live Webpage

- A deployed, accessible URL (e.g., Netlify, Vercel, GitHub Pages)
- Implements your Figma designs as a functional, interactive application
- Populated with the fictional LDV data from the appendices (or your own)

3.3 Code Repository

- Source code on GitHub (or similar), shared via link
- A README.md explaining: tech stack, how to run locally, design decisions
- Clean, readable code structure

AI & Tools: You are encouraged to use AI tools and free-tier platforms (Figma, Netlify, v0.dev, Bolt.new, Claude, ChatGPT, Google AI Studio, Cursor, etc.) to accelerate your work. Document which tools you used and how in your README or Figma file.

Submission: Reply to the email this brief was attached to with your three links (Figma, live URL, code repo). If you have any questions, don't hesitate to reach out.
